

# iHungry Api Database ER Diagram

Nick Gallimore | April 16, 2019

## Main functions

Crawl websites  
to fill out recipe  
data

User wants list of  
recipes that use their  
ingredients

User enters ingredient  
fields:

Picture of UPC\*  
UPC Number\*  
Names for Ingredient\*  
Quantity Left  
Quantity Left Unit  
Product Quantity  
Product Quantity Unit

\* 1 of 3 required, rest  
optional

Query recipes table for  
recipes with user's  
ingredients

If no Spoonacular recipe call  
Spoonacular's search by  
ingredient API and store  
response as a recipe

Display matched recipes to  
user

Store user entered data

If UPC entered lookup  
Product Name with  
multiple UPC APIs/DBs

Store Product  
Name(s) as  
IngredientName(s)  
for the ingredient

Run NLP on  
Product Name(s)  
to get ingredient  
name(s)

Store NLP results  
as  
IngredientName(s)  
for the ingredient
